

2023 Potato Tuber Moth

Potatoes NZ is working to help support growers in their management of Potato Tuber Moth (PTM). As part of this we have a monitoring system in place using pheromone traps to catch PTM within potato crops. These results are multiple paddocks, averaged for the given area (Pukekohe, Pukekawa, Tuakau, etc.). Please use this information in combination with in-field crop scouting to help make decisions around crop management.

We have seen an increase in pressure across Pukekohe, 9.5 moth per day (up from 6) and Onewhero 9 moth per day (up from 3.5). Pukekawa continues to have high pressure 9 moth per day (up from 8). The average catch for the region is 7.0 moth per day (up from 5), keeping the whole area in the moderate risk bracket.

There have been larvae found in potato canopies, so keep scouting your crops. Keep monitoring your soil for cracking, as cracking soil gives moth/ larvae a direct route to tubers.
