

2024 Potato Tuber Moth

Potatoes NZ is working to help support growers in their management of Potato Tuber Moth (PTM). As part of this we have a monitoring system in place using pheromone traps to catch PTM within potato crops. These results are multiple paddocks, averaged for the given area (Pukekohe, Pukekawa, Tuakau, etc.). Please use this information in combination with in-field crop scouting to help make decisions around crop management.

The overall PTM pressure across the region has decreased to 6 moth per day (down from 25). Pukekawa which had a massive spike last week has dropped back down to 5 moth per day. All areas monitored have dropped below the higher risk of 10 moth per day.

There is variable larva pressure in crops, which highlights the importance of in-field crop monitoring. Keep monitoring your soil for cracking, as cracking soil gives moth/ larvae a direct route to tubers.
