

2024 Potato Tuber Moth

Potatoes NZ is working to help support growers in their management of Potato Tuber Moth (PTM). As part of this we have a monitoring system in place using pheromone traps to catch PTM within potato crops. As the total number of paddocks drops some results are from individual paddocks rather than an average of an area (Pukekohe, Pukekawa, Tuakau, etc.). Please use this information in combination with in-field crop scouting to help make decisions around crop management.

The overall PTM pressure across the region has increased slightly to an average of 12 moth per day (up from 11). Onewhero has the highest catch with 15 moth per day. Pukekohe has decreased to 8 (down from 13). Patumahoe, Tuakau and Pukekawa are either at, or above 10 moth per day.

There is variable larva pressure in crops, which highlights the importance of in-field crop monitoring. Keep monitoring your soil for cracking, as cracking soil gives moth/ larvae a direct route to tubers.
